Installing Claude Code

- 

The Desktop App: No Terminal

 The Desktop App: No Terminal, No Fear

You'll walk away with: the mental model that makes everything else in this course easy, plus a tour of every part of the app screen you'll use.

The #1 thing that scares people off building is the terminal: that classic black screen with text. Here's the relief: **you don't have to use it.** The desktop app gives you identical power in a familiar window. And if you ever do want the terminal, it's just as capable, with lessons

The Undo Button — You Can't Bre...

Here's the mental model: one powerful engine, two ways to drive it. The terminal is the bare dashboard Claude Code was born with: lean, fast, and loved by people who like full keyboard control. The desktop app is that same engine with a friendly dashboard: buttons, a live

-  (Optional) The Few Terminal Co... 

preview, your files in view. Identical power underneath. You're just choosing the dashboard that fits you.

We start you on the app because it's the gentler one to learn on. That's the only reason. Plenty of excellent builders live in the terminal, and plenty never leave the app. Both ship the same things.

A tour of what's on your screen

When you open Claude Code, you'll see four areas. That's all you need to know:

- **Input box (bottom).** You type what you want here in plain English. This is the *only* place you ever "command" the app.
- **Conversation area (middle).** Everything you've said and everything Claude has said back, scrolling. Claude's tool calls (file edits, terminal runs, browser opens) appear here as you watch — you see the work happen.
- **File / preview pane (side or full-screen).** Files Claude creates show up here. If you're building a website, a live preview opens here — you can click around it like a real user.
- **Settings (top-right gear icon).** Where your global [CLAUDE.md](#), your skills, your MCPs, and your account live. You'll touch this twice in the next stage and then rarely again.

The workflow, forever

Once it's open, this is every interaction you'll ever have with Claude Code:

1. **You type** what you want in plain English ("build me a one-page site for my bakery").
2. **Claude works** — you watch it think, create files, run things. The conversation area shows everything live.
3. **You see the result** — files appear in the side pane, a live preview opens, you click around.
4. **You react** — "make the header bigger," "I don't like the colours," "add a booking form" —

results. That single shift is what separates people who build from people who “always meant to learn.”

What beginners get wrong here

- **Trying to memorize commands.** There are none. You talk to it in English.

- **Quitting the app to "start fresh."** Don't — you lose context. Just say *"let's start a new task"* or use the new-session button.

- **Watching it work silently.** Talk back. If it's heading the wrong direction, interrupt. Claude is a collaborator, not a vending machine.
