🕒 90 Minutes A Night: The Stolen-Hours Cadence ✓

You'll walk away with: a realistic operating rhythm for the busiest version of you — so you make real weekly progress in stolen hours instead of waiting for a free weekend that never comes.

The #1 thing standing between members and finishing isn't difficulty — it's **time**. Most people here are doing this in stolen hours: after the kids are down, before work, on a lunch break. The ad promise was honest — *this works in 90 minutes a night* — but only if you run it the right way. Here's how.

One build at a time (kill shiny-object syndrome)

The fastest way to make zero progress is to start over every time you find a "better" idea. "Starting over when I find a better way" and "shiny object syndrome" are named pains in this community for a reason. **Pick one build. Finish it. Ship it. Then move.** A shipped ugly thing beats a perfect thing you restarted four times.

The 90-minute session shape

- **5 min** — open your project, read your last note to yourself ("tomorrow: do X"). No deciding what to work on — you already decided last night.
- **75 min** — one small, specific move. Not "build the app." One screen, one feature, one fix. Use **plan mode** so Claude scopes it before touching anything.

Progress is weekly, not nightly

Some nights you'll only fix one thing. Fine. The win is **shipping one real thing a week** — a page, a feature, a build, a post. Stack 52 of those and you're unrecognizable in a year. The

people who win here aren't the ones with the most time; they're the ones who keep showing up for 90 minutes and don't restart.

The whole cadence in one line: **one build, one small move a night, checkpoint, leave a note for tomorrow.** Boring, repeatable, and it compounds.

 **Done when:** you've picked your ONE current build, you know the 90-minute session shape, and you've written your next single move down for tomorrow.

Prompts

I get about 90 minutes a night and I keep starting over on new ideas. Help me lock in ONE build to finish. Ask me what's already half-done, what's closest to shippable, and what I'd actually be proud to post. Pick one for me, then break it into small nightly moves I can each do in 75 minutes. End by giving me tonight's single move so I can start right now.
