DON'T WORRY! You Can't Mess This Up

The #1 thing I hear from beginners: *"What if I do it wrong, or break something?"*

You can't. Two reasons.

1. There's no right way. There's your way. Everything we teach is a starting point, not a rulebook. If you find something that works better for you than what's in a lesson, use it. That isn't doing it wrong. That's doing it right.

2. You're not writing code. You're talking. "Code" is in the name, but you'll basically never write any. You tell Claude what you want in plain English. Type it, or do what I do and use speech-to-text. Ramble, hand it a half-formed idea, say something vague and ask it to make it specific, or have it ask you questions until it knows enough. You don't need the perfect prompt. You need to start talking.

And it's hard to break. When something's off, you don't fix code or start over. You tell Claude what's working and what isn't, and ask it to update itself with what it just learned. That back-and-forth IS the work, not a sign you messed up.

You will learn how to use Claude Code the FASTEST simply by talking to it more. If you don't understand why it did something or how to do something ASK CLAUDE!

I know people won't like this, but Claude will explain what it did and why in its responses back to you, so READ THEM! It's the best way to understand how Claude thinks and acts.

Just start.
